Issued at 0500 LST

General Situation

The monsoon trough lies across the Central, the East and the lower Northeast into the active low-pressure cell over the South China Sea while the moderate southwest monsoon prevailing over the Andaman Sea, the South and the Gulf will strengthen. Isolated heavy rain are likely in the country while isolated very heavy rain are possible in the East. People in these areas should beware of heavy to very heavy rain and its accumulation that may cause flash flood and overflows, especially along foothills near waterways and lowlands.

The wind and waves in the upper Andaman Sea are likely about 2 meters high, the lower Andaman Sea and the upper Gulf, the waves are likely 1-2 meters high and above 2 meters high in thundershowers. All ships should proceed with caution and keep off thundershowers.

In addition, a tropical depression over the Philippines moves in to the upper South China Sea, expected to intensify into a tropical storm for the next phase. This storm is expected to make landfall over South of China during 19–20 Sep with not approaching Thailand.
