Weather Advisory
Subject: Heavy to Very Heavy Rains in Thailand
No.13 (259/2026)

Isolated heavy rain are likely in the country. The effect will occur in many parts as follow:

- **On 13 October 2026**, the lower North, the lower Northeast, the Central including Bangkok and its vicinity, the East and the South.

Because of the high pressure system from China extends to cover upper Thailand while the easterly wind and the southeasterly wind prevails over the lower Northeast, the Central, the East and the South with the southwest monsoon prevails over the Andaman Sea. Meanwhile the monsoon trough lies across the lower South.

People in the country should beware of thundershowers, gusty wind, and heavy rains and accumulated rains that may cause flash floods, overflows and landslides especially along the waterways near foothills and lowlands. In addition, people should avoid staying in open areas, under large trees, or near unstable billboards.

The winds force the wave in the Andaman Sea and the Gulf up to above 2 meters high in thundershowers. All ships should proceed with caution and keep off thundershowers.

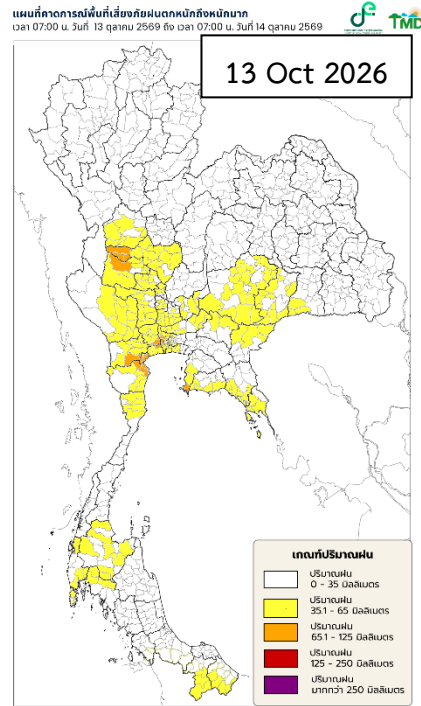

The final advisory is in effect on 13 October 2026, at 5.00 a.m.

(Signed) Nattawut Dandee
(Mr. Nattawut Dandee)
Deputy Director-General
Acting Director-General, Thai Meteorological Department
